**Pump Controls,
Radio & SCADA**

Complete Control Solutions for Domestic Water

Pump Controls – We offer pump controls for a single or multiple pump systems. Alternating pumps, lead lag control, PID pressure control, tank level control, metering pumps and more are incorporated into our controls. We offer NEMA & IEC motor starters as well as VFD's for our systems. We make them easy to use, install and maintain for years of trouble free service.

VFD's – We have over 20 years experience with variable frequency drives so we make them work. Our UL 508A approved panel shop specializes in outdoor enclosures for booster & well pumps. Drives are programmed for constant pressure control so start up in the field is fast and easy. Experience makes the difference so check us out when you need drives.

Radio Controls – When sites are separated we have a reliable cost effective radio system. We use license free radios with a range of up to 20 miles line of sight. You can use float switches, probes, PSI transducers or any other level sensor to trigger a call signal for a pump. Anything from a pump and tank to multiple sites can be connected for control, alarming and data acquisition.

Cellular Controls – Our line of cellular controls allows you to be in contact with remote sites. Low tank levels, tripped overloads, bad pumps, break ins & power outages can be reported via text messages to multiple cell phones. These are more than auto dialers since they have outputs and data that can be accessed remotely. They can be used for tank level control when no line of site exists, start and stop pumps and send process data automatically. Cellular offers exciting new ways to stay in touch with and control equipment.

SCADA – We offer supervisory and control systems. Specializing in small to medium water companies we provide a very cost effective way to monitor your system like big municipalities, maybe better. Let us show you how automation can reduce outages and manpower requirements

At 3P motor controls we are system integrators, panel builders, VFD specialists, product designers, and PLC programmers. We have a UL508A listing so we can build to suit any job requirement. We supply distributors, contractors and other integrators with our products, service and training. Expand your business with high tech controls and let us help.
